

Elements Assignment #1:

Profile an Element by creating an Infographic

Due: Tuesday (Sep 13), 8am, via e-mail

The Single Slide (.pptx or .pdf) should include:

- Properties of the Element
- How it is found in nature
- How it was “discovered”
- Some uses (compounds with the element are OK too)
- At least one interesting fact about it

The point of an Infographic is to display information in an eye-catching yet informative format. There should be some graphics/visuals of interest. The information should also be accurate.

Put reference sources in small font at the bottom of the slide.
