## Additional Problems Assignment 11

1. An underwater telephone cable is to cross a shallow lake from point $A$ to point $B$. Stakes are located at $A, B$ and $C$. Distance $A C$ is measured to be $112 \mathrm{~m} \angle C A B$ to be $118.4^{\circ}$, and $\angle A B C$ to be $19.2^{\circ}$. Find the distance $A B$.

2. To estimate the length $C B$ of the lake in the figure that follows, a surveyor measures $A B$ and $A C$ to 89 m and 75 m , respectively, and $\angle C A B$ to be $95^{\circ}$. Find the approximate length of the lake.
