

Review Problems

To help you and your classmates study for the exam, do the following.

1. Look up which section or part of section you are suppose to do.
2. Choose two representative problems of different level of difficulty from the section.
3. On one piece of paper clearly and neatly write both problems without solutions.
4. On another piece of paper clearly solve one of the problems.

Remember the following:

1. These problems are going to be scanned so write big and clearly so it can be read.
2. Only write on one side of the page, since the scanner does not scan both sides.
3. Do not staple the pages together.
4. Write your name on all the papers so students can line up the problem and the solution (which will be different files).
