

Review Problems to be turned in on December 13 (During Class).

To help you and your classmates study for the exam, do the following.

1. Look at the section you are suppose to do.
2. Choose two representative problems of different level of difficulty from the sections.
3. Use standard white computer paper without lines.
4. On one piece of paper clearly and neatly write each problem without solutions.
5. On another piece of paper (pieces of paper if you need room) clearly solve each problem.

Remember the following:

1. These problems are going to be scanned so write big and clearly so it can be read.
2. Only write on one side of the page, since the scanner does not scan both sides.
3. Do not staple the pages together.
4. Write your name and your section/topic on all the papers so students can line up the problem and the solution (which will be different files).
5. If you don't turn it in on time it won't be included and your classmates won't have problems from that section.
6. Please do a good job with this since your classmates are counting on you.
