Math 310   Fall 2021

Homework Guidelines

Each weeks homework assignment is graded out of 20 points. 5 problems will be selected to be graded in detail. Those problems will be graded out of 3 points as follows:

3 Points If the solution is correct and the write-up is clear (i.e. each step follows logically from the previous and can be read.)

2 Points If either the solution is correct but the write-up is unclear or the write-up is clear but the solution has minor errors.

1 Point If a good attempt was made at the problem but does not fit the criteria for 3 or 2 points.

0 Points No good attempt was made at the problem.

The other 5 points will be based on completeness of the other problems. Points will be taken away if problems are missing or unreadable.
