

Number Systems

Decimal Number Set: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9

10^7	10^6	10^5	10^4	10^3	10^2	10^1	10^0

Example: $1024 = 4 \times 1 + 2 \times 10 + 0 \times 100 + 1 \times 1000$

Binary Number Set: 0, 1

2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0
128	64	32	16	8	4	2	1

Example: $1010 = 0 \times 1 + 1 \times 2 + 0 \times 4 + 1 \times 8 = 10$ in decimal

$11111111 = 255$ in decimal

Octal Number Set: 0, 1, 2, 3, 4, 5, 6, 7

8^7	8^6	8^5	8^4	8^3	8^2	8^1	8^0

Example: $121_8 = 1 \times 1 + 2 \times 8 + 1 \times 64 = 81$ in decimal

Hexadecimal or HEX Number Set: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F

16^7	16^6	16^5	16^4	16^3	16^2	16^1	16^0

Example: $FF = 15 \times 1 + 15 \times 16 = 255$ in decimal

An easy way to convert an eight digit binary number to a two digit hexadecimal number is to treat the 8 digit binary as two hexadecimal numbers consisting of 4 binary numbers. See table below:

<i>Binary</i>	<i>Hex</i>
0000	0
0001	1
0010	2
0011	3
0100	4
0101	5
0110	6
0111	7
1000	8
1001	9
1010	A
1011	B
1100	C
1101	D
1110	E
1111	F

So, the 8 digit binary number

$$0011\ 1011 \Rightarrow 3B$$

since 0011 in hexadecimal is 3 and 1011 in hexadecimal is B.

Converting Decimal to Binary

Example: Convert 52_{10} to binary.

$$52/2 \quad \text{rem} = 0 = a_0$$

$$26/2 \quad \text{rem} = 0 = a_1$$

$$13/2 \quad \text{rem} = 1 = a_2$$

$$6/2 \quad \text{rem} = 0 = a_3$$

$$3/2 \quad \text{rem} = 1 = a_4$$

$$1/2 \quad \text{rem} = 1 = a_5$$

So 52_{10} in binary is $= a_5 a_4 a_3 a_2 a_1 a_0 = 110100$

Binary Arithmetic

Addition table for binary numbers:

$$0 + 0 = 0$$

$$0 + 1 = 1$$

$$1 + 0 = 1$$

$$1 + 1 = 0 \text{ and carry } 1 \text{ to the next column}$$

Subtraction table for binary numbers:

$$0 - 0 = 0$$

$$0 - 1 = 1 \text{ and borrow } 1 \text{ from the next column}$$

$$1 - 0 = 1$$

$$1 - 1 = 0$$

Multiplication table for binary numbers:

$$0 \times 0 = 0$$

$$0 \times 1 = 0$$

$$1 \times 0 = 0$$

$$1 \times 1 = 1$$
