

1. Consider the following wheel:

Suppose that X is the average of 10 rolls of the inner wheel, Y is the average of 20 rolls of the outer wheel, and Z is the average of 20 rolls of the inner wheel. Find the following:

- $E(X)$
 - $E(Y)$
 - $E(Z)$
 - Which is bigger $P(X > 0.5)$ or $P(Z > 0.5)$? Explain.
2. Suppose two dice are rolled successively. Let X be the sum of the two dice, Y be the difference (first roll minus the second), Z the number of odd rolls and W the number of prime rolls. Find:
- the ranges of four random variables
 - $P(X \geq 5)$
 - $P(X \geq Z)$
 - $P(X = 2 | Z = 0)$
 - $P(X = 12 | W = 1)$
 - $E(Z)$
 - $E(Z + W)$
 - Are Z and W independent? Prove or disprove.
3. Find the following places on campus and take a picture of yourself there and send it to me.

- (a) The Counseling Center.
- (b) The International Center.
