

1. Consider the following wheel:

Suppose that  $X$  is the average of 10 rolls of the inner wheel,  $Y$  is the average of 20 rolls of the outer wheel, and  $Z$  is the average of 20 rolls of the inner wheel. Find the following:

- $E(X)$
  - $E(Y)$
  - $E(Z)$
  - Which is bigger  $P(X > 0.5)$  or  $P(Z > 0.5)$ ? Explain.
2. Suppose two dice are rolled successively. Let  $X$  be the sum of the two dice,  $Y$  be the difference (first roll minus the second),  $Z$  the number of odd rolls and  $W$  the number of prime rolls. Find:
- the ranges of four random variables
  - $P(X \geq 5)$
  - $P(X \geq Z)$
  - $P(X = 2 | Z = 0)$
  - $P(X = 12 | W = 1)$
  - $E(Z)$
  - $E(Z + W)$
  - Are  $Z$  and  $W$  independent? Prove or disprove.
3. Find the following places on campus and take a picture of yourself there and send it to me.

- (a) The Counseling Center.
- (b) The International Center.
